

Economy Report

Philippines

Jerremeo Gabás

Advanced Science and Technology Institute

Outline

- Grid Computing Status
 - Activities in the country
 - Activities in the organization
 - Popular applications for grid computing
- Your needs for utilizing grid computing
 - In application areas
 - In Human Resource Development for grid computing researchers and engineers
- How you utilize grid computing as a business in the country

Philippine Export

Philippine Export

Philippine Export

Bagyong Milenyo (Typhoon Xangsane) September 2006

Philippines: 197 lives, 118 million USD

Vietnam: 71 lives, 629 million USD

Thailand: 14 lives, 8.1 million USD

Myanmar: 16 lives

Significance of the Grid

- People need reliable forecasts and other hazard assessments

Significance of the Grid

- People need reliable forecasts and other hazard assessments
- Scientists involved in modelling natural phenomena need accurate input data (come from various sources)

Significance of the Grid

- People need reliable forecasts and other hazard assessments
- Scientists involved in modelling natural phenomena need accurate input data (come from various sources)
- Timely response to a disaster begins with a map

FedGIS

- Collaborative mapping project for hazard assessment
- Initial data, standards and policies from the **READY Project**
 - Office of Civil Defense-National Disaster Coordinating Council (OCD-NDCC)
 - Philippine Atmospheric, Geophysical and Astronomical Services Administration (PAGASA)
 - Philippine Institute of Volcanology and Seismology (PHIVOLCS)
 - Mines and Geoscience Bureau (MGB)
 - National Mapping and Resource Information Authority (NAMRIA)
 - Advanced Science and Technology Institute (ASTI)

GEO Grid

- CICC-GEO Grid Visit in Manila, October 2007
 - Agencies visited were interested in using the ASTER data, as well as sharing data where applications can be tested on their data
 - Among the data that might be available to the GEO Grid project will be the hazard maps from the READY project

Grid Activities of ASTI

BioInformatics
Project

FedGIS
Project

EU-Asia
Grid
Project
(ASTI,
ADMU)

GridInfrastructure Project

Philippine e-Science Grid Program
(Jan 2008 to Dec 2010)

Philippine Research, Education and
Government Information Network (PREGINET)

Grid Infra Project

- Participants

- Advanced Science and Technology Institute
- Ateneo de Manila University
- Philippine Atmospheric, Geophysical and Astronomical Services Administration
- Philippine Institute of Volcanology and Seismology
- University of the Philippines
- Diliman Core Group (testbed for national deployment)
- Runs on top of the PREGINET Infrastructure

Other Grid Activities in the Philippines

- PAGASA Interactive Climate and Weather Information Network (PICWIN) under the Philippine Atmospheric, Geospatial and Astronomical Services Administration (PAGASA)
- Ontology and Context Medical image Distributed Intelligent Access (ONCO-MEDIA) by Ateneo de Manila University (ADMU)

Grid Activities in the Philippines

- Bayanihan Computing Group of the Ateneo de Manila University
- GridWulf Experimental System by Mindanao State University – Iligan Institute of Technology
- Other universities have individual grid computing efforts (need coordination among each other)

Popular applications

- Animation rendering
- Weather modeling
 - High Resolution Model (HRM)
 - MM5
- Computational biology and chemistry
 - UP Los Baños, IRRI, PhilRice

Grid Computing Needs

- Availability of applications
 - users know only a few grid applications that can run natively on the grid
 - many of the applications need to be (re)written
- Researchers need to be trained to use grid applications as well as write grid applications
- Grid engineers develop methods that ease the use and deployment of grid applications

Grids as a Business

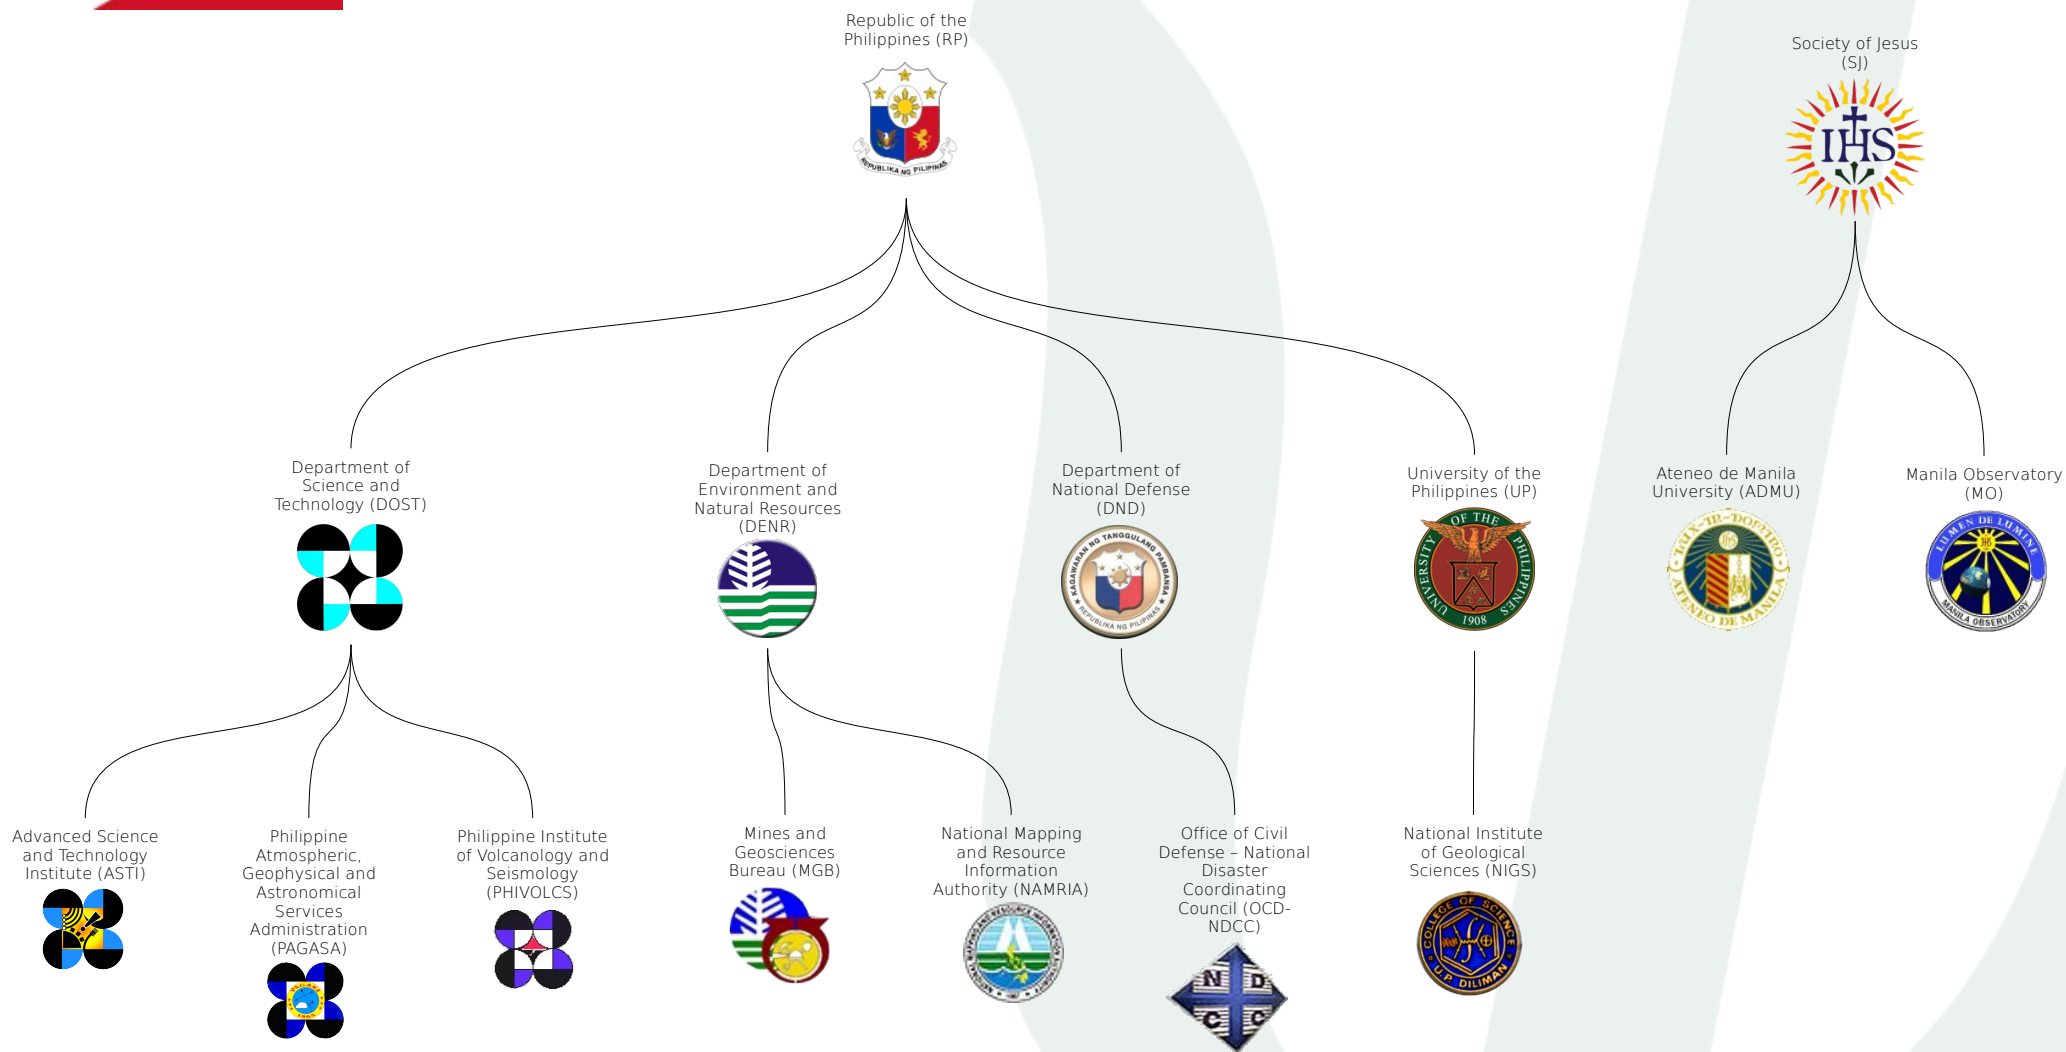

- Enterprise Solutions offered in the Philippines
 - Oracle

About ASTI

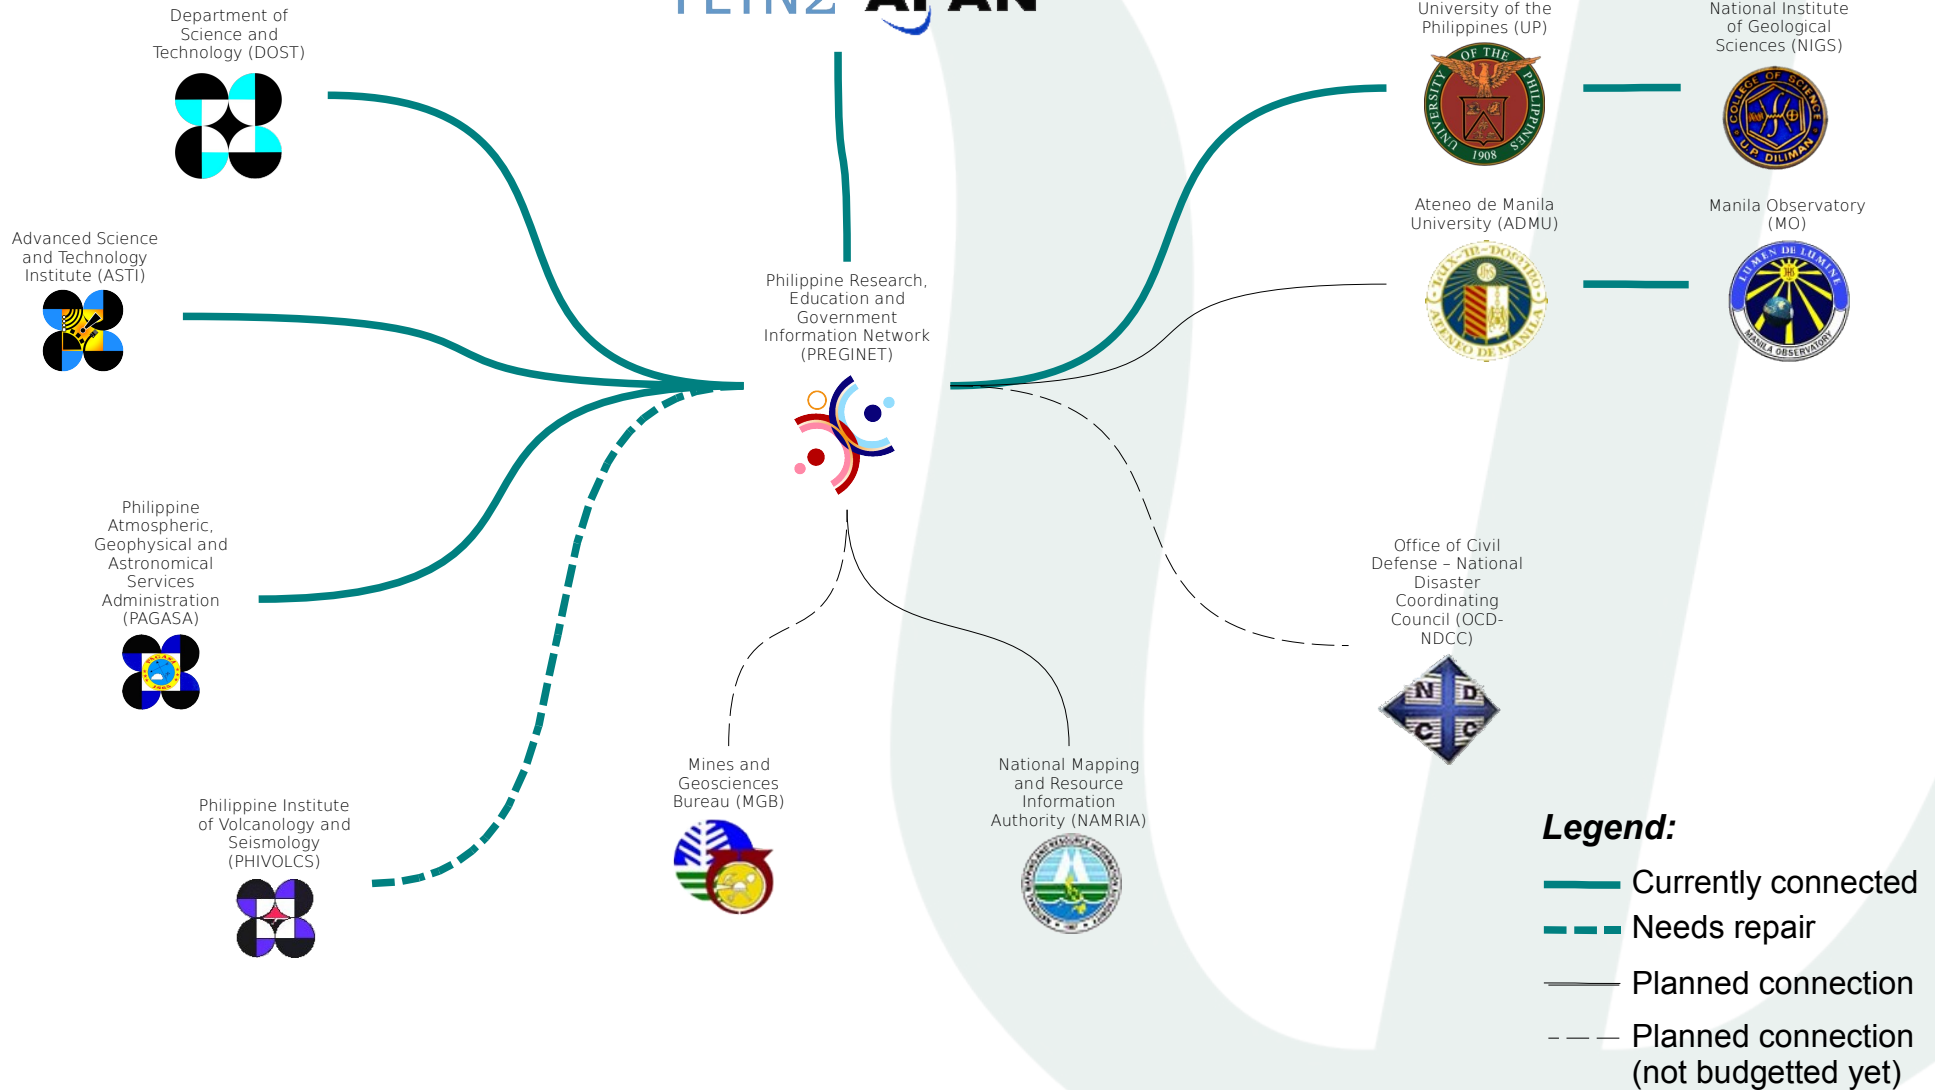

Relationships of Agencies and Universities in the Philippines

Network Connections

Thank you

“Successful response starts with a map.”
— *National Research Council*
